SPC Series

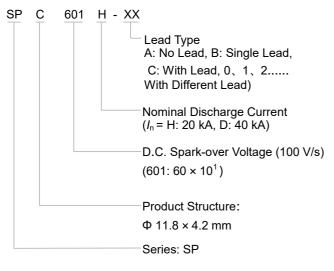

#### **Features**

- Fast Response
- Stable Performance Over Surface Life
- High Current Rating
- Low Capacitance
- High Insulation Resistance
- RoHS & REACH Compliant

### **Applications**

- Class I 、 Class II and SPD
- N-PE Mode Protection In AC Power

### **Part Numbering System**

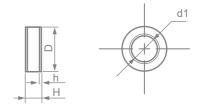

#### **Description**

Gas Discharge Tube (GDT) is a single-gap or multi-gap switching overvoltage protection device. Under normal circumstances, the GDT is in a high-impedance state; when suffer a surge, the GDT will change from a high-impedance state to a low-impedance state, and release the surge energy to the ground, reducing the residual voltage of the circuit, thereby protecting the equipment circuit or protect the human body from the hazards of transient overvoltage. GDT is formed by high-temperature sealing of metal electrodes, metallized ceramics, inert gas or other mixed gases.

#### **Agency Information**

Agency Symbol	Standards	The File No. and certification No. obtained by SETsafe   SETfuse
<i>₩</i>	UL1449	E322662
c <b>71/</b> ®	UL1449	E322662

#### **Dimensions (mm)**

D	d <sub>1</sub>	Н	h
Ф11.8 ± 0.3	Ф6.8	4.2 ± 0.5	0.8

Notes: May increase each kind of connect mode according to the customer different demand.

#### Reminder:

Part numbering system in the datasheet is only for selecting correct parameter and product features. Before placing order, please contact us for specifications and use the part number and product code in the specifications to place order to ensure the part is correct. Product code is the unique indentification.

### PE Box Package

Item	PE Box	Inner Box	Carton
Dimensions (mm)	225 × 205 × 16	230 × 210 × 98	440 × 250 × 250
Quantity (PCS)	192	960	3840

Notes: Packaging dimensions and quantity are for reference only.

The above picture packaging is only suitable for type A products. For the other appearance and packaging mode and quantity, please refer to the specification.

# Glossary

Item	Description
	D.C.Spark-over Voltage
$V_{s}$	The voltage at which the GDT sparks over with slowly increasing d.c. voltage.
	— (IEC 61643-311)
	Impulse Spark-over Voltage
V	The highest Voltage which appears across the terminals of a GDT in the period between the application of an
	impulse of given wave-shape and the time when current begins to flow.
	— (ITU-T K.12)
	Arc Voltage
$V_{a}$	Voltage drop across the GDT during arc current flow.
	— (IEC 61643-311)
	Glow Voltage
$V_{\mathrm{gl}}$	The peak value of the voltage drop across the GDT when a glow-current is flowing, It is sometimes called the
J	glow mode voltage.  — (ITU-T K.12)
	(110 1 14.12)
	8/20 Current Impulse
8/20 μs	Current impulse with a nominal virtual front time of 8 µs and a nominal time to half-value of 20 µs.
	— (IEC 61643-11)
	10/350 Current Impulse
10/350 µs	Current impulse with a nominal virtual front time of 10 µs and a nominal time to half-value of 350 µs.  — (IEC 61643-11)
	— (IEC 01043-11)
	1.2/50 Voltage Impulse
1.2/50 µs	Voltage impulse with a nominal virtual front time of 1.2 μs and a nominal time to half-value of 50 μs.
	— (IEC 61643-11)
	Alternating Discharge Current
1	The r.m.s. value of an approximately sinusoidal alternating current passing through the gas discharge tube.
	— (ITU-T K.12)
	Nominal Discharge Current
<i>I</i> <sub>n</sub>	Crest value of the current through the GDT having a current waveshape of 8/20 µs.
	— (IEC 61643-11)
	Maximum Discharge Current
<b>I</b> <sub>max</sub>	Crest value of a current through the GDT having an 8/20 µs waveshape and magnitude according to the manu-
	facturers specification. $I_{\text{max}}$ is equal to or greater than $I_{\text{n}}$ .
	— (IEC 61643-11)

SPC Series

	Impulse Discharge Current
$I_{\mathrm{imp}}$	Crest value of a discharge current through the SPD with specified charge transfer Q and specified energy W/F the specified time.
	— (IEC 61643-
	· ·
	Voltage Protection Level
$U_{p}$	Maximum voltage to be expected at the SPD terminals due to an impulse stress with defined voltage steepness and an impulse stress with a discharge current with given amplitude and waveshape.
	— (GB 18802.11、IEC 61643-
	maximum r.m.s. voltage
<b>U</b> c	Which may be continuously applied to the SPD's mode of protection.
	— (IEC 61643-
	follow current
I <sub>f</sub>	Peak current supplied by the electrical power system and flowing through the SPD after a discharge current im-
<b>I</b> f	pulse.
	— (IEC 61643-
	class I tests
class I	Tests carried out with the impulse discharge current limp, with an 8/20 current impulse with a crest value equal
Classi	the crest value of limp, and with a 1.2/50 voltage impulse.
	— (IEC 61643-
	class II tests
class II	Tests carried out with the nominal discharge current $I_n$ , and the 1.2/50 $\mu$ s voltage impulse.
	— (IEC 61643-

GD I
Gas Discharge Tube
SPC Series

#### **Usage**

- 1. Do not operate GDT in power supply networks, whose maximum operation voltage exceeds the minimum spark-overvoltage of the GDT.
- 2. The GDT may become hot in the event of longer periods of current stress (burn risk). In the event of overload the connectors may fail or the component may be destroyed.
- 3. If the contacts of GDT are defective, current load can cause sparks and loud noises.
- 4. When air pressure is from 55 kPa to 106 kPa. The relative altitude shall be +5000 m to -500 m.

#### Replacement

The GDT is a non-repairable product. For safety sake, please use equivalent GDT for replacement.

### Storage

The packaged GDT should be placed in a dry, ventilation and non-corrosive environment.

#### **Installation Position**

Do not install the GDT in a touchable position.

#### **Mechanical Stress**

Do not take violent action such as knocking when assembling, to avoid product failure.
